

# **Summit Days**

**Structure and numbering of JVN, and  
Security content automation framework**

**November 14, 2012**

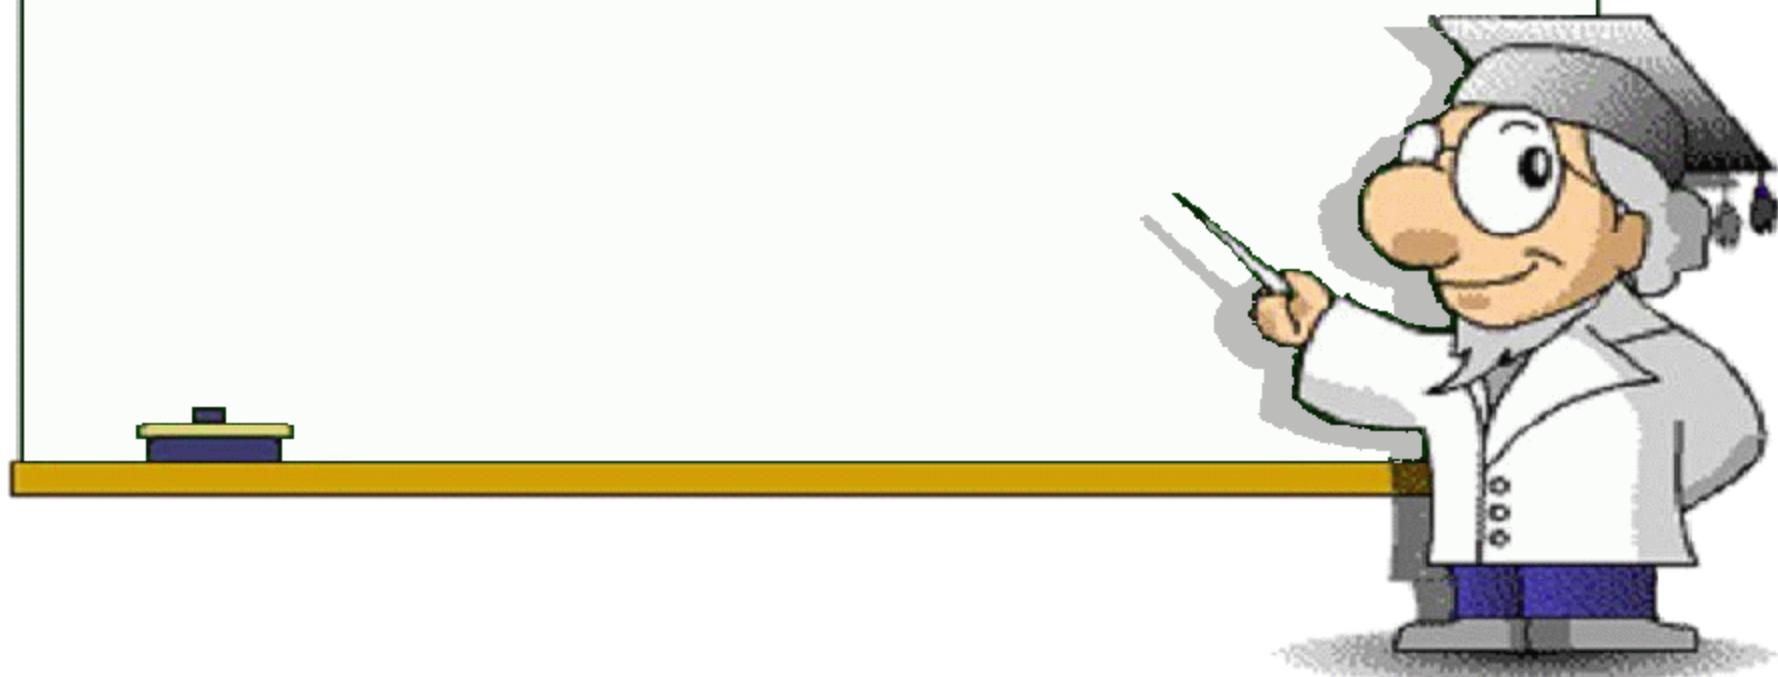

**Masato Terada**  
**IT Security Center, IPA**

- **This session provides an overview of how JVN has adopted SCAP.**
  - JVN stands for "Japan Vulnerability Notes" and provides vulnerability and related information on software used in Japan.
  - JVN has adopted SCAP, and provides local (domestic) information and international information, resulting in the JVN Security Content Automation Framework (MyJVN).

- **Structure and numbering of JVN**
- **JVN Security Content Automation Framework**
- **MyJVN project**

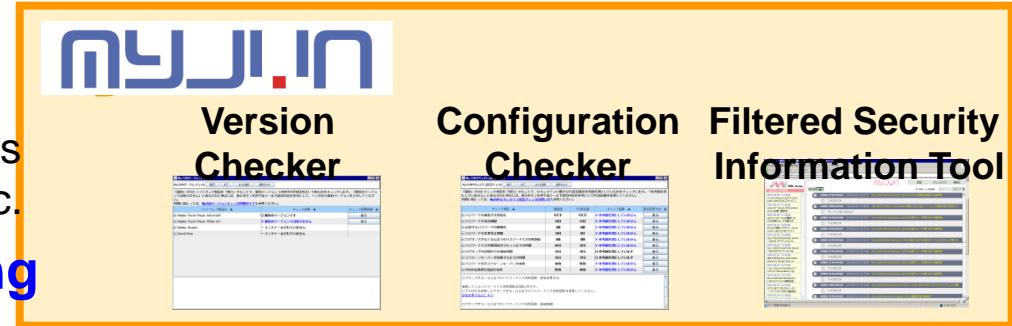

# structure and numbering of jvn.

= ( Internationalization + Localization ) x Machine readable

IPA

- **MyJVN**

Providing vulnerability countermeasure information via machine readable interface such as Web APIs and Version Checker etc.

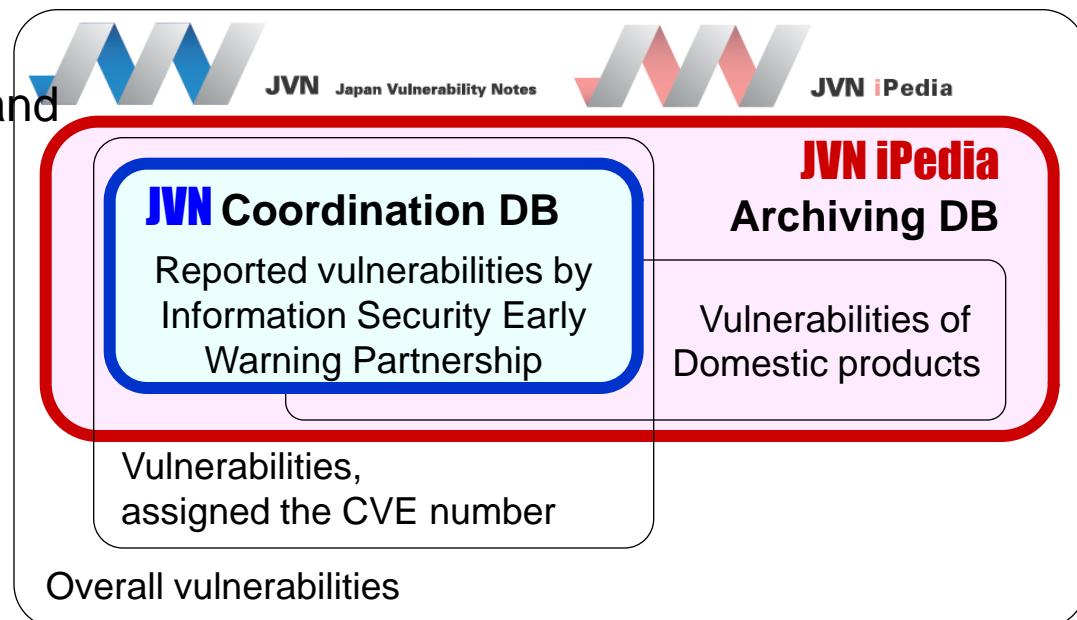

- **JVN (Vulnerability handling coordination DB)**

Providing vulnerability countermeasure information and Japanese vendor status for reported vulnerabilities by “Information Security Early Warning Partnership”

- **JVN iPedia (Vulnerability archiving DB)**

Providing countermeasure information database for covering overall vulnerabilities

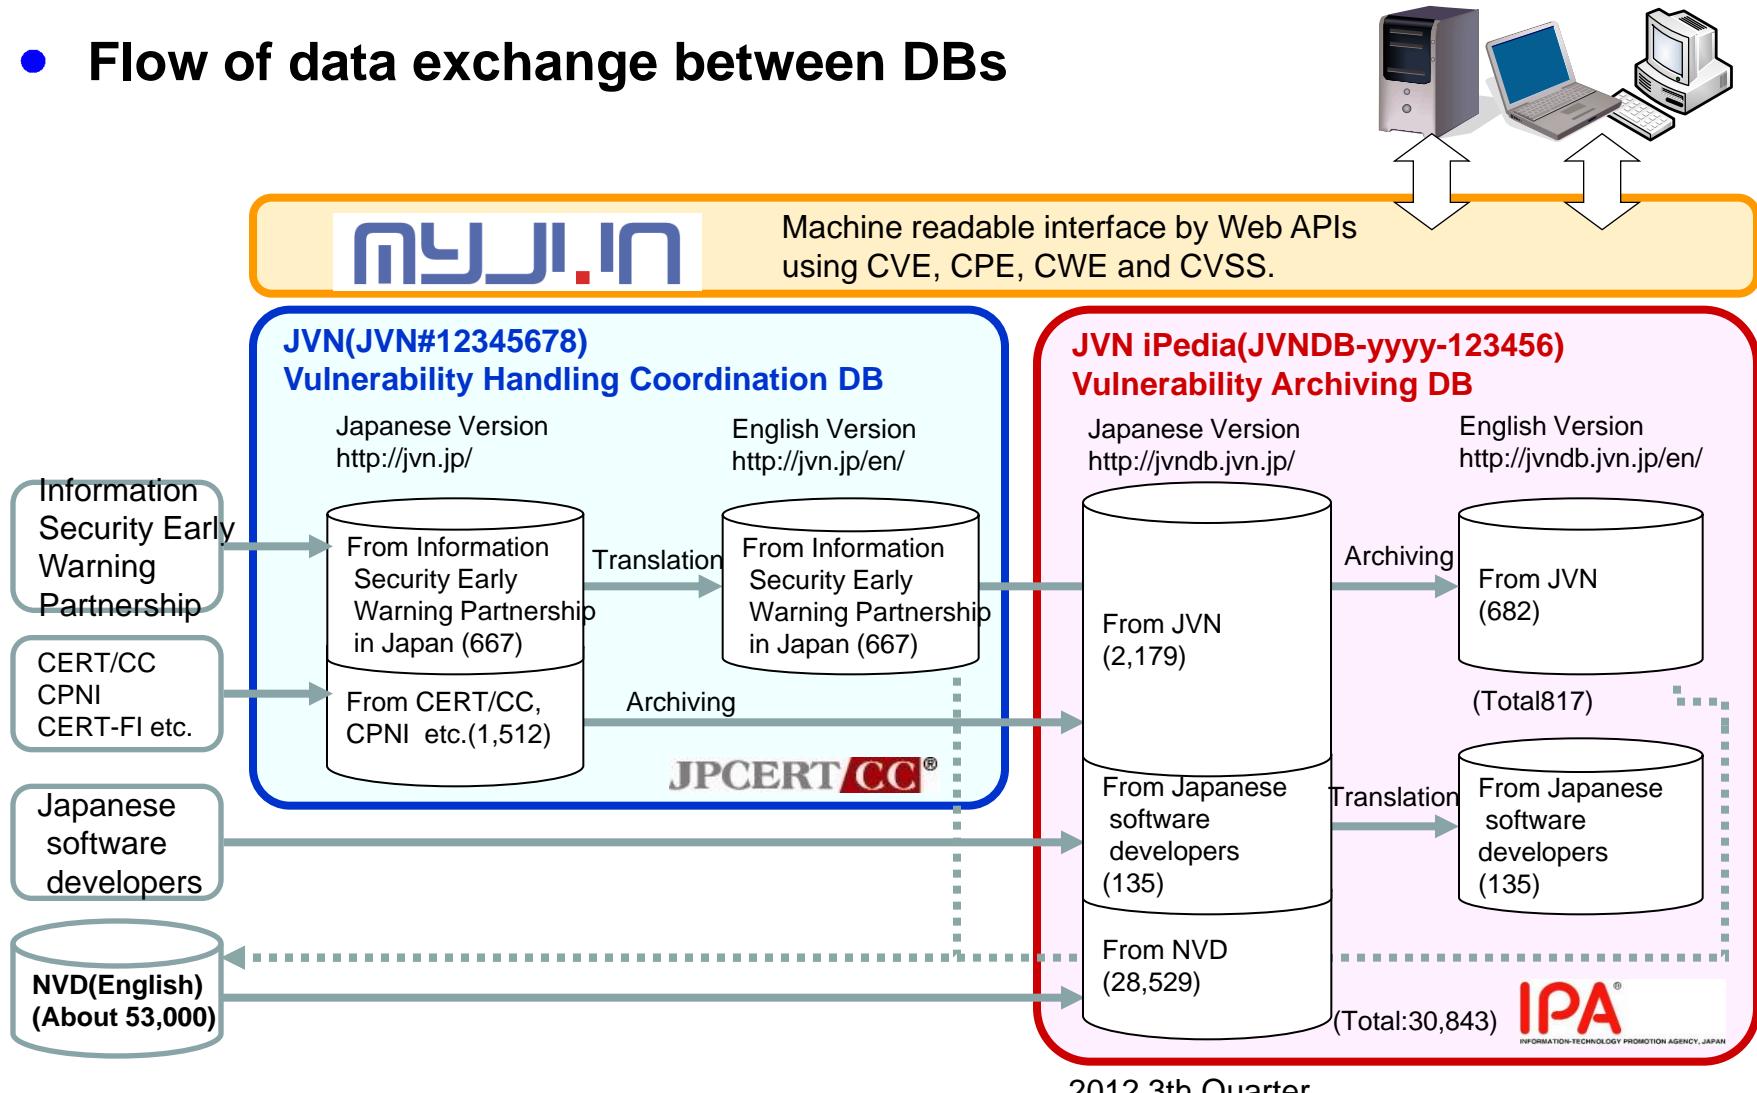

# structure and numbering of jvn.

IPA

## Structure

- Flow of data exchange between DBs

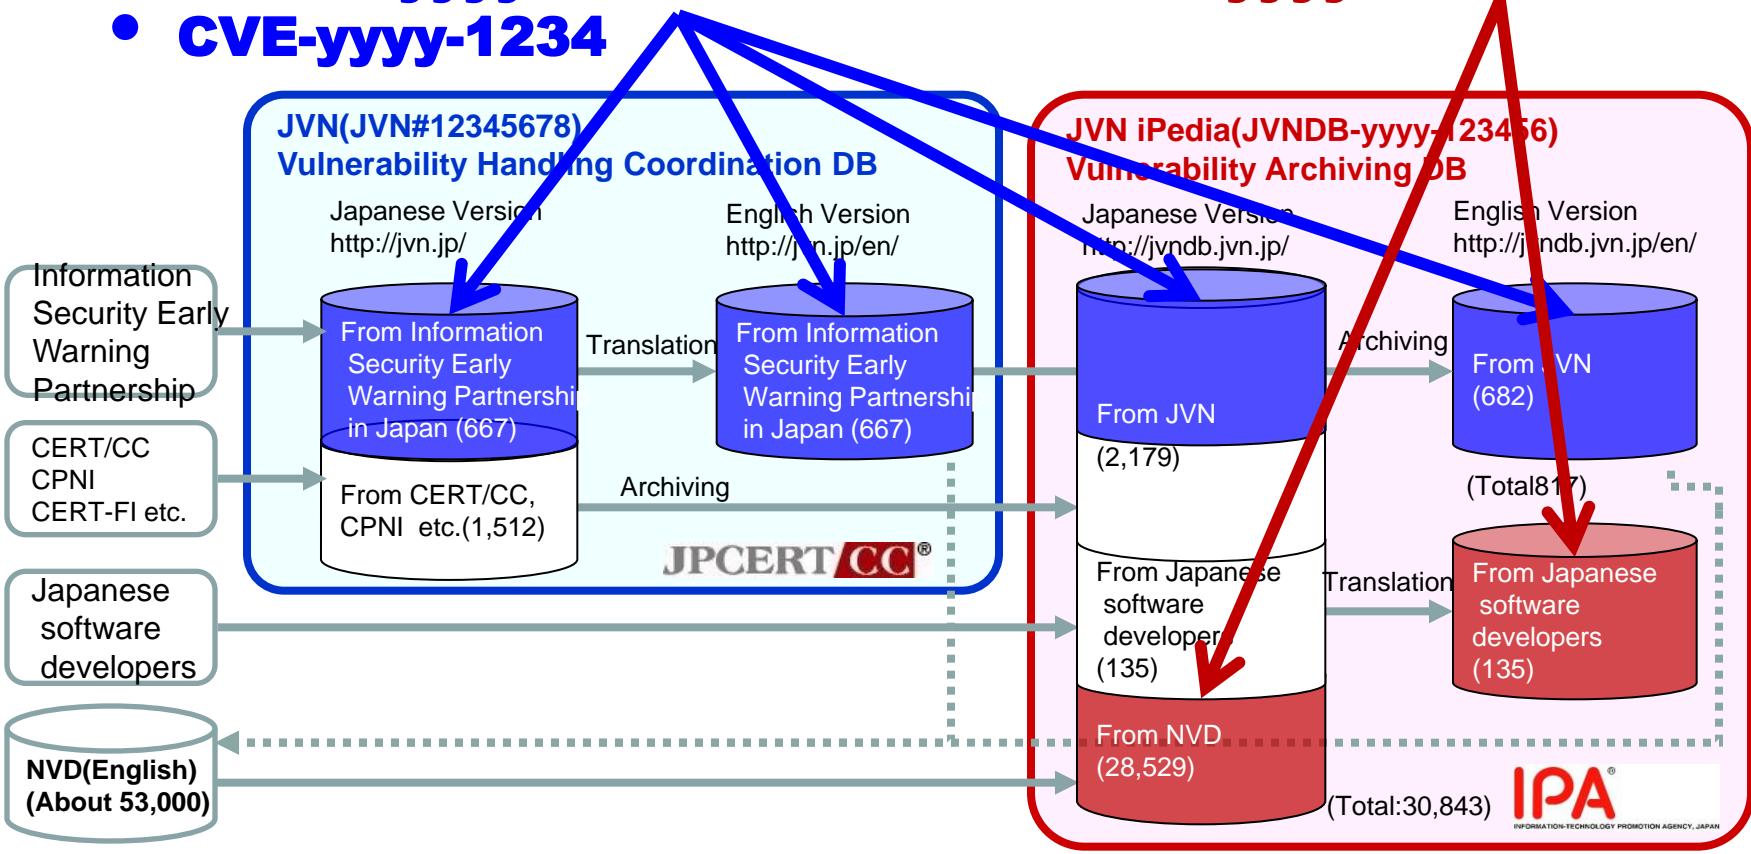

# structure and numbering of jvn.

IPA

## Numbering

### Assign three identifiers

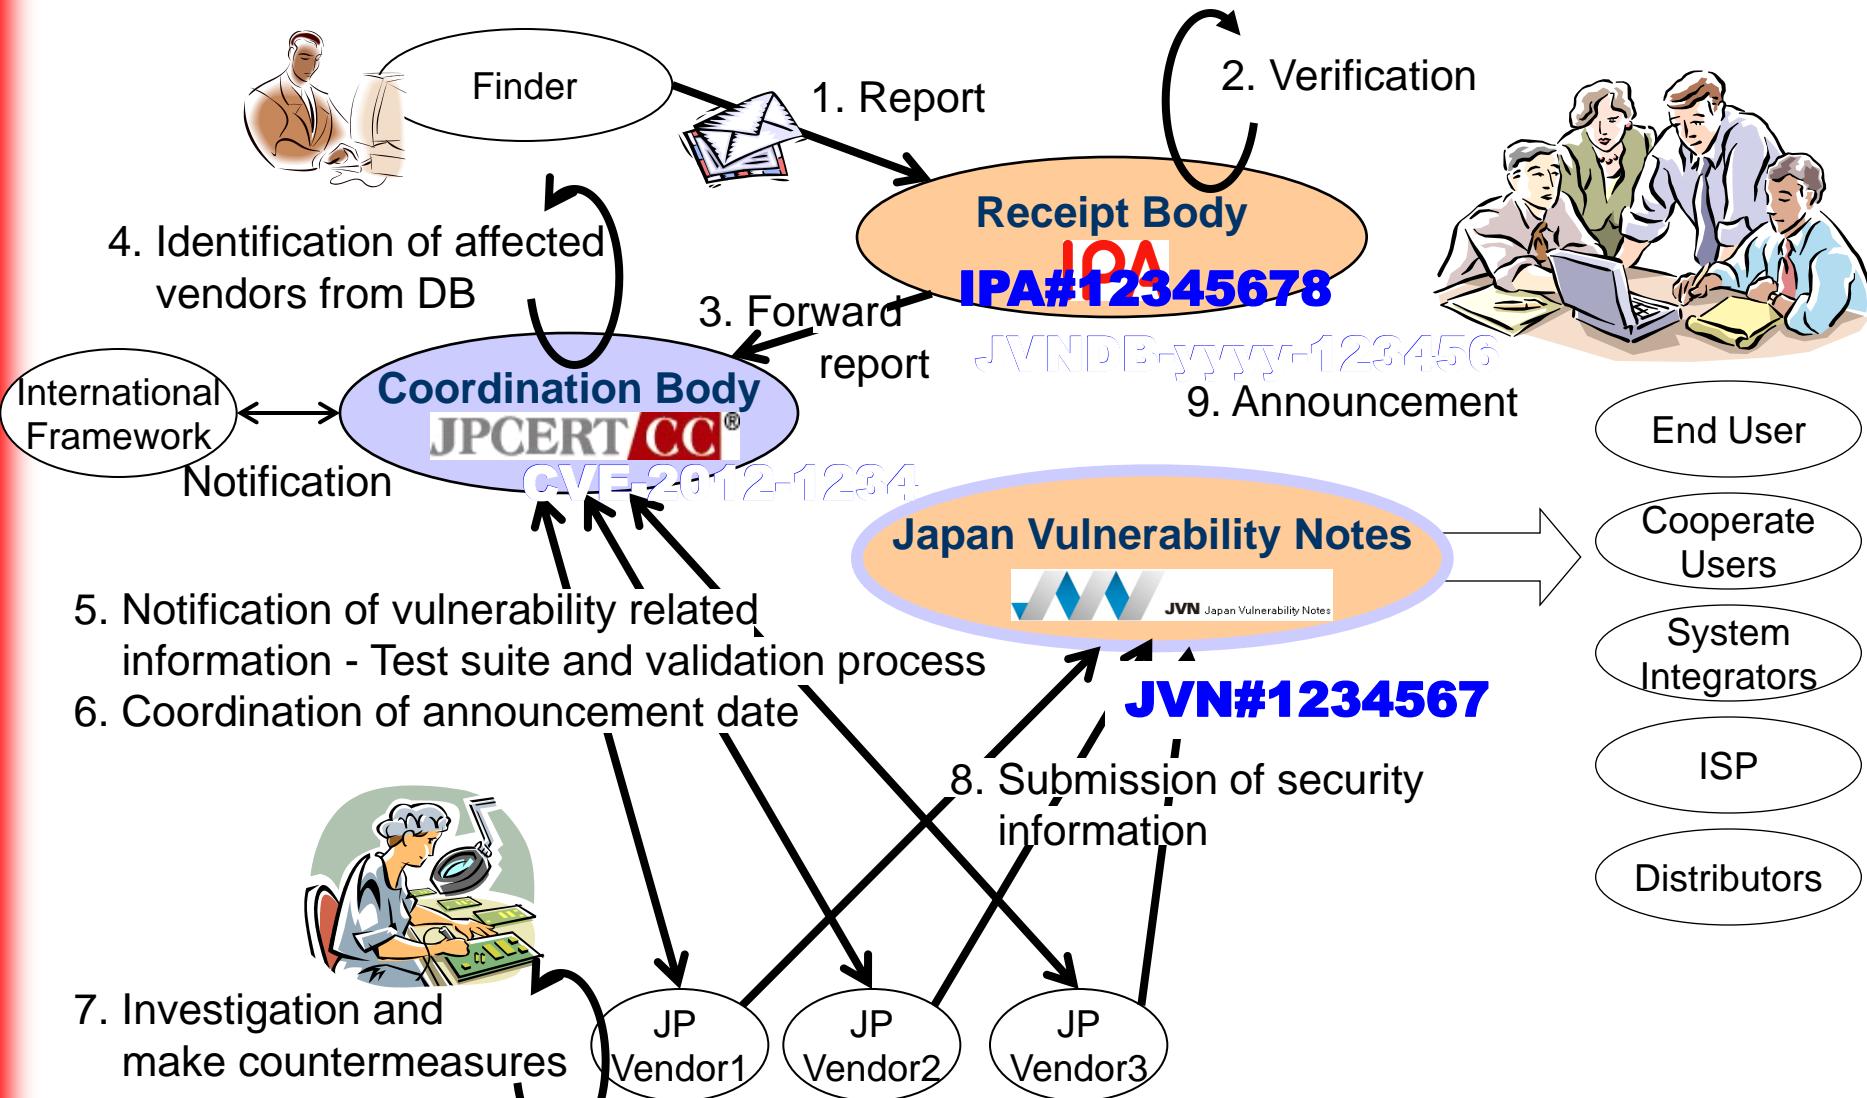

- **JVN#12345678**
- **JVNDB-yyyy-123456**
- **CVE-yyyy-1234**

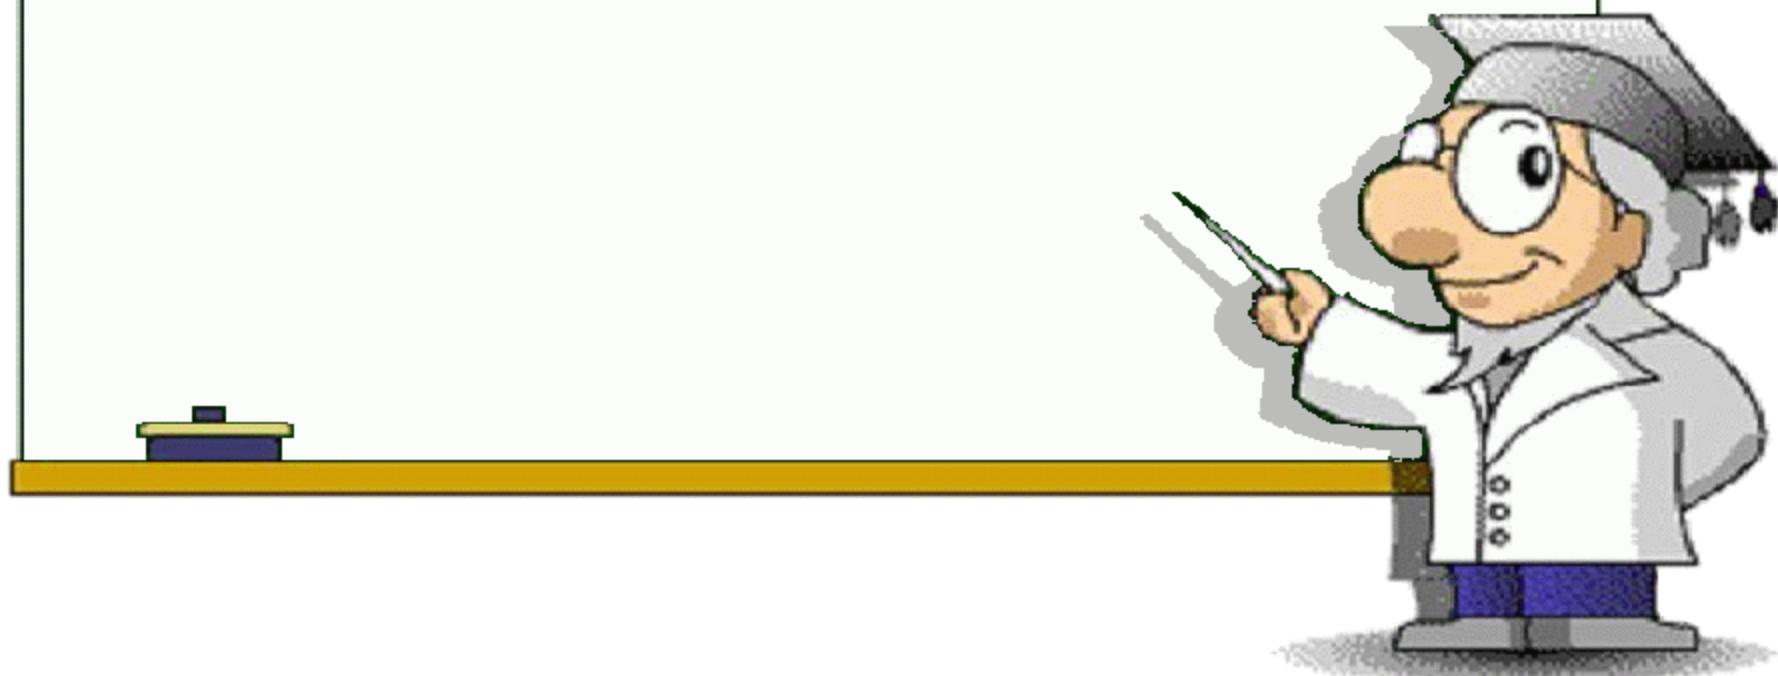

# structure and numbering of jvn.

## Numbering and Vulnerability Reporting

IPA

- Structure and numbering of JVN
- **JVN Security Content Automation Framework**
- MyJVN project

# jvn security content automation framework.

= ( JVN + JVN iPedia ) x MyJVN

## = MyJVN framework

- To enable application developers to use data through open interface
  - Adoption for common enumeration and specifications
- To establish global JVN
  - Internationalization as vulnerability reference source
  - Localization as vulnerability reference source (focus to Japanese region)

**JVN Security Content Automation Framework  
(aka. MyJVN framework) has adopted SCAP.**

# related activities (phase 1).

## JVN Security Content Automation Framework

IPA

- ▲ Jun 2002: JVN working group formed
- ▲ Feb 2003: Trial site ([jvn.doi.ics.keio.ac.jp](http://jvn.doi.ics.keio.ac.jp)) to the public
- ▲ Jul 2003: JVNRSS stared
  - ▲ Jul 7, 2004: Information security early warning partnership
  - ▲ Jul 8, 2004: **JVN (aka. Vuln. handling coordination DB)** <http://jvn.jp/>
- ▲ Jan 2006: Evaluating CVSS V1.0 for adoption
  - ▲ Sep 2006: CVSS V1.0 Calculator [CN][NL][EN][DE][JA][KO][PT][ES]
- ▲ Apr 2007: **JVN iPedia (aka. Vuln. archiving DB)**  
<http://jvndb.jvn.jp/> (**Adopted CVE and CVSS**)
  - ▲ Aug 2007: Adopted CVSS V2.0 in JVN iPedia
- ▲ May 2008: English Versions of JVN and JVN iPedia
  - ▲ Sep 2008: JVN iPedia extension (**Adopted CWE**)
  - ▲ Sep 2008: JVN iPedia extension (**CVE Declaration**)

# related activities (phase 2).

# jvn - vulnerability notes (vn).

<http://jvn.jp/en/>

IPA

The screenshot shows a Microsoft Internet Explorer window displaying a JVN vulnerability note for a SEIL Series router buffer overflow. The main content area lists various resources like JPCERT Alert, Reports, and CERT Advisory. A link to the CVE page (CVE-2011-0454) is present. To the right, a vertical sidebar lists links such as Home, What's New, Instant Search, Lists, Reports, and Vendor Notes. A separate window titled 'http://jvn.jp - JVN#88991166: SEIL Series routers vulnerable to buffer overflow - Microsoft Internet Explorer' is also visible, showing the same information.

**TRTA08-190B**  
**Multiple DNS implementations vulnerable to cache poisoning**

#### Overview

Deficiencies in the DNS protocol and common DNS implementations facilitate DNS cache poisoning attacks. Effective attack techniques against these vulnerabilities have been demonstrated.

#### Event Information

Date (UTC)	Description
2008-08-24	<p>ICANN Domain Name Security Paper Released</p> <p>ICANN's strategic and operating plans call for ICANN to be operationally ready to deploy DNSSEC at the root level and work with relevant stakeholders to determine how this should be implemented.</p>
	<p>Office of Management and Budget <a href="#">M-08-23: Securing the Federal Government's Domain Name System Infrastructure (Submission Draft Agency Plans Due by September 5, 2008)</a></p> <p>This memorandum describes existing and new policies for deploying Domain Name System security.</p>

Event Information includes followings.

- Discovered date of vulnerability
- Published date of any advisories
- Released date of exploit code
- Discovered date of worm
- Published alerts from governments.
- etc.

- **JVN iPedia**

- JVN iPedia (aka. Vulnerability archiving DB) focuses on regional vulnerabilities (which depends on IT market) in Japan.
- Vulnerability archiving DB stores summary and countermeasure information on vulnerabilities in Japanese software and other products posted on JVN.

- **MyJVN API**

- A software interface to access and utilize vulnerability countermeasure information stored in JVN iPedia, with testing support tools.
- To enable application developers to use data through open interface, JVN iPedia has adopted SCAP, a set of standards for describing vulnerability countermeasure information.

- A custom applications can access the data in JVN iPedia and various vulnerability management services can now efficiently utilize vulnerability countermeasure information.

JVN iPedia Vulnerability Countermeasure Information Database

MyJVN >> API >> getVendorList [ Japanese ]

getVendorList Getting on the vendor list in JVN ver 1.0

This method gets the vendor list by the followed filtering parameters.  
XML schemaLocation="http://jvndb.jvn.jp/schema/results\_3.0.xsd"

Sample Queries

Default query  
Get XML result for a given CPE {vendor} field: 'micro'.  
Get XML result for a given CPE {vendor} field: 'micro' and initial 'n' character.

Reset Submit

Parameter name	Description	Parameter Value
method	Method name of API	getVendorList
startItem	Start position of items	<input type="text"/> Integer (1 - The item number of results)
maxCountItem	Maximum number of items	<input type="text"/> Help
cpeName	CPE vendor name (cpe:/{vendor})	<input type="text"/> Help
keyword	Keyword search for a vendor by name	<input type="text"/> Help
lang	Language (Japanese/English)	<input checked="" type="radio"/> ja: Japanese <input type="radio"/> en: English
xsl	Applying XSL to XML (Enable/Disable)	<input type="checkbox"/> 1:Enable 0:Disable (Under Construction)

Detail of Vulnerability Note

JVNDB-2008-000009

Apache Tomcat fails to properly handle cookie value

Overview

Apache Tomcat from the Apache Software Foundation contains a vulnerability that could allow a remote attacker to inject a cookie to a user's web browser. Apache Tomcat from the Apache Software Foundation is a web container that implements Java Servlets and JavaServer Pages. The developer reports that this issue exists because of an incomplete

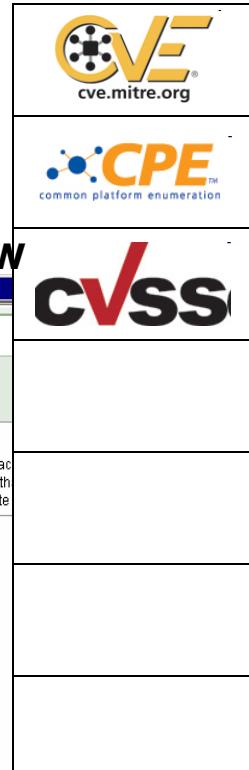

Affected system

Apache Software Foundation

# myjvn version checker.

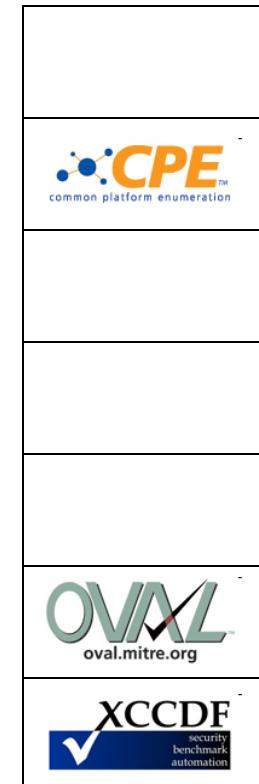

<http://jvndb.jvn.jp/apis/myjvn/vccheck.html>

- Improvement of the keeping up-to-date environment
  - Splitting the keeping up-to-date steps into two phase.
    - Step 1: Check phase ... **MyJVN - Version Checker**  
Is your PC keeping the latest version ?
    - Step 2: Remedy phase ... **Our Next issue**  
Let's update the applications and the plug-ins on your PC.

The screenshot shows a Windows application window titled "My JVN Version Checker". The window has a toolbar with "Start", "Close", "Select All", and "Reset" buttons. Below the toolbar is a message: "Select the check box for the program. Next, click on the start button." A table lists various software programs with checkboxes next to their names. The checked items are: Adobe Flash Player (ActiveX), Adobe Flash Player (Plug-in), Adobe Reader, JRE, Lhaplus, Mozilla Firefox, Mozilla Thunderbird, and QuickTime.

Product Name [ascending]	Results	Details [ascending]
<input checked="" type="checkbox"/> Adobe Flash Player (ActiveX)		
<input checked="" type="checkbox"/> Adobe Flash Player (Plug-in)		
<input checked="" type="checkbox"/> Adobe Reader		
<input checked="" type="checkbox"/> JRE		
<input checked="" type="checkbox"/> Lhaplus		
<input checked="" type="checkbox"/> Mozilla Firefox		
<input checked="" type="checkbox"/> Mozilla Thunderbird		
<input checked="" type="checkbox"/> QuickTime		

# myjvn version checker.

<http://jvndb.jvn.jp/apis/myjvn/vccheck.html>

- MyJVN Version Checker supports multi platforms and multi products.

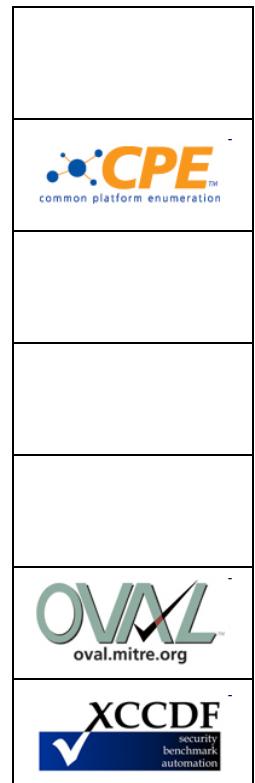

The screenshot shows the 'MyJVN Version Checker' application window. On the left, under 'Platforms', there is a list of supported operating systems: Windows XP, Vista, 7, 8, Windows 2003, 2008, and CentOS 5, Red Hat Enterprise Linux 5. On the right, under 'Products', there is a list of various software components. A callout box highlights the 'Mozilla Thunderbird' entry, which is marked as 'NOT Installed' with a status message 'Poor: Older Version'. Another callout box highlights the 'OpenSSL' entry in the 'Products' list.

Platform	Status
Lunascape	---
Mozilla Firefox	---
Mozilla Thunderbird	NOT Installed Poor: Older Version
QuickTime	---

Product	Status
JRE	---
Apache HTTP Server	---
Apache Tomcat	---
BIND	---
OpenSSL	---

**Products**

- Adobe Flash Player
- Adobe Reader
- Adobe Shockwave Player
- JRE
- Lhaplus
- Mozilla Firefox
- Mozilla Thunderbird
- QuickTime
- Lunascape
- Becky! Internet Mail
- OpenOffice.org
- VMware Player

# myjvn security configuration checker. IPA

<http://jvndb.jvn.jp/apis/myjvn/sccheck.html>

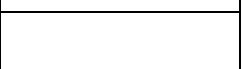

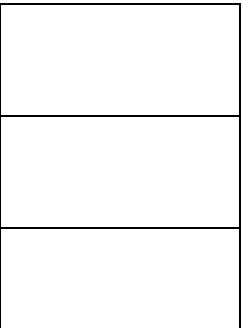

- Improvement of the keeping the secure configuration on your PC
  - Splitting the steps into Check and Remedy phase.

My JVNセキュリティ設定チェック

MyJVNセキュリティ設定チェック 実行 終了 全てを選択 選択をクリア

「選択」されたチェック項目を「実行」することで、セキュリティに関するPC設定値が参考値を満たしているかをチェックします。「参考値を満たしていません」と表示された場合には、表示ボタンを押下後ツール下部の内容を参考にしてPC設定値を変更してください。利用にあたっては、[MyJVNセキュリティ設定チェックの使い方](#)も参照ください。

チェック項目 ▲	推奨値	PC設定値	チェック結果 ▲	結果詳
<input checked="" type="checkbox"/> パスワードの最低文字数設定	12文字	CCE-2981-9: Minimum Password Length		
<input checked="" type="checkbox"/> パスワードの有効期間	60日	CCE-2920-7: Maximum Password Age		
<input checked="" type="checkbox"/> 記録するパスワードの履歴数	24個	CCE-2994-2: Enforce Password History		
<input checked="" type="checkbox"/> パスワードの変更禁止期間	1日	CCE-2439-8: Minimum Password Age		
<input checked="" type="checkbox"/> ログオンできなくなるまでのパスワード入力失敗回数	5回	CCE-2986-8: Account Lockout Threshold		
<input checked="" type="checkbox"/> パスワード入力失敗回数のリセットまでの時間	15分	CCE-2466-1: Reset Account Lockout Counter		
<input checked="" type="checkbox"/> ログオン不可状態からの復旧時間	15分	CCE-2928-0: Account Lockout Duration		
<input checked="" type="checkbox"/> パスワード付きスクリーンセーバーの有無	有効	CCE-4500-5: Password protect the screen saver		
<input checked="" type="checkbox"/> USBメモリ自動実行機能の無効化設定	無効	CCE-2154-3: Disable the Autorun functionality		

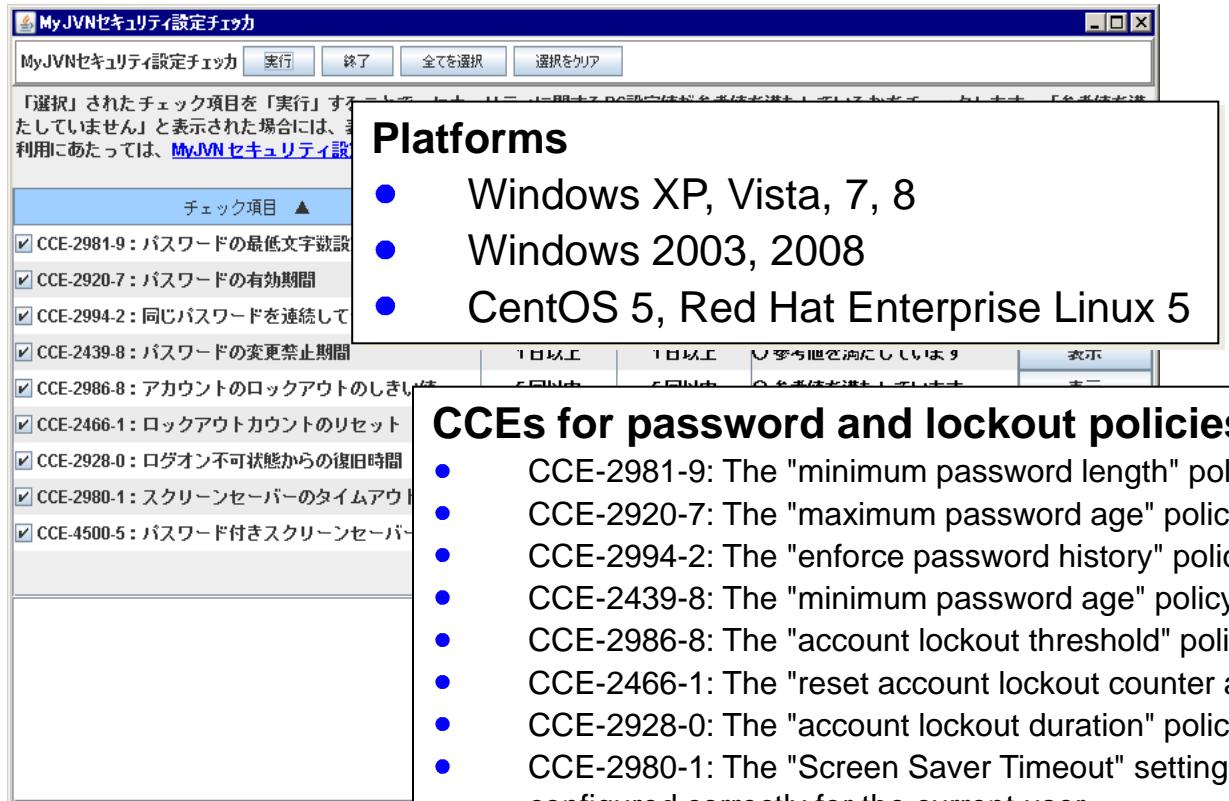

# myjvn security configuration checker. IPA

<http://jvndb.jvn.jp/apis/myjvn/sccheck.html>

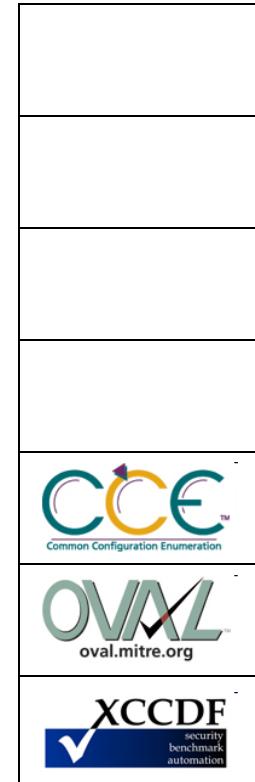

- MyJVN Security Configuration Checker supports two platforms, the CCEs for password and lockout policies.

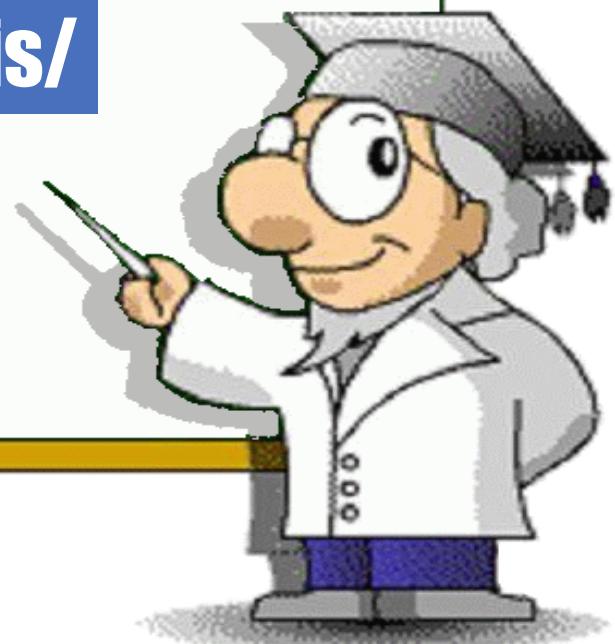

## CCEs for password and lockout policies

- CCE-2981-9: The "minimum password length" policy
- CCE-2920-7: The "maximum password age" policy
- CCE-2994-2: The "enforce password history" policy
- CCE-2439-8: The "minimum password age" policy
- CCE-2986-8: The "account lockout threshold" policy
- CCE-2466-1: The "reset account lockout counter after" policy
- CCE-2928-0: The "account lockout duration" policy
- CCE-2980-1: The "Screen Saver Timeout" setting should be configured correctly for the current user.
- CCE-4500-5: The "Password protect the screen saver" setting should be configured correctly for the current user.

**myji.in** is the framework of machine  
readable environment with the common  
enumeration based as a security information  
sharing and exchanging.
